

## How to split audio clips into separate files using regions in Reaper

1. Set markers to split your sections by pressing the **M** key to set the marker
2. Double-click the marker to edit the name/id/color if desired
3. Press **OK**

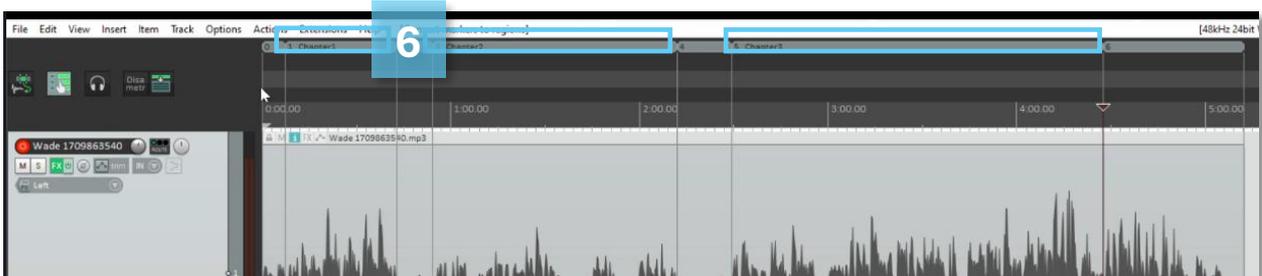

In this example I have a marker at the beginning and end of each section. Only the beginning will need a name. Here marker 2 and 4 will be thrown out and only keep "Chapter1", "Chapter2", and "Chapter3"

4. Navigate to **Actions>SWS: Convert markers to regions**
5. Press **Run**

6. This will change all your markers to regions

7. Navigate to **File>Render**
8. On the render to file menu choose directory
9. In filename, use "\$project\_\$region" – this will place the project name and region notation on the individual output files
10. Select **Render X files...**
11. Output Region Files
